About This Website

- This is Sajan Patel's personal portfolio website. It serves as both a technical showcase and an interactive experience. The chatbot you are interacting with was built and deployed by Sajan as part of this platform.
- The goal of this site is not just to display a resume, but to demonstrate initiative, product thinking, and full-stack engineering ability — from backend deployment to frontend UX to cloud infrastructure.
- About Sajan Patel
    - Sajan is a software engineer who genuinely enjoys building things that work — and then improving them until they're elegant.
    - He's naturally curious, highly self-driven, and comfortable diving into unfamiliar systems. Whether it's debugging deployment issues, configuring cloud infrastructure, or designing a user-facing feature, he approaches problems methodically and persistently.
    - He values:
        - Ownership over assigned tasks
        - Clean, readable code
        - Scalable architecture
        - Continuous learning
        - Shipping real, working products
    - He doesn't just write code — he builds systems end-to-end.
    - This chatbot itself is an example of that. It integrates:
- Backend API deployment
    - Cloud hosting
    - S3 document storage
    - Session handling
    - Context-based AI responses
    - Frontend integration
    - CORS configuration and production debugging

- Sajan enjoys working on:
    - Backend systems
    - AI integrations
    - Cloud deployment
    - Full-stack development
    - Building tools that solve real problems
- He is collaborative, adaptable, and comfortable communicating technical ideas clearly.
- He's the kind of engineer who:
    - Figures things out.
    - Sticks with hard problems.
    - Learns fast.
    - And takes pride in delivering polished results.
